TRANSFERS TO ACUTE
Madonna is a hospital with clinical staff on-site 24 hours a day, seven days per week. Clinical staff are trained to respond to any medical emergency.

Last year 10.3% percent of acute and specialty rehabilitation patients with cancer returned to the hospital for either planned or unplanned reasons.

INDEPENDENCE LEVEL
Patients with a cancer in Madonna’s acute rehab program made more progress toward independently being able to do activities like taking care of themselves and communicating, as well as improving mobility – these skills are rated on a functional independence measure (FIM) scale of 1-7 and then totaled. Currently there is no regional or national benchmark for cancer so comparisons below are drawn from neoplasm benchmarks only.

LENGTH OF STAY
Individuals with cancer stayed at Madonna’s acute rehab an average of 22.7 days.

FOLLOW UP AT 6 MONTHS AFTER DISCHARGE
94% of people with cancer state that they maintained or improved since their discharge in areas such as self-cares, mobility and communication.

90.3% of people with cancer state that they are able to access the things they need in their community.

44.4% of people with cancer have returned to work or school.
